

Sprint 1 Report

Clothr, Clothr Team

October 21, 2017

Actions to Stop Doing: Stop having scrum meetings end too early and use the whole allotted 15 minutes because that means we haven't been doing as much work. For Sprint 1 we should be discussing how much we familiarized ourselves with the technology we'll be using and how we'll use the technology on the project.

Actions to Start Doing: Start doing more group work meetings because we can hold each other accountable to do the work and also help each other out. Also having longer meetings or having more meetings. For sprint 1 it was a little difficult because most of the work was individual work but for sprint 2 we will start combining the technologies that we have learned and it will be easier to communicate if we work together.

Actions to Keep Doing: We should keep our meeting times because it still works for everyone at this moment. We should also keep on meeting outside of our work meetings, it'll keep the team chemistry solid and will allow us to be more comfortable with each other so we can freely ask questions and ask for help. It will also make the work environment more friendly and will increase our production.

Work Completed/Not Completed: The work we completed was reading up on the documentation and getting familiar with Xcode, swift, and Amazon's API. The work we haven't completed was getting familiar with firebase database and Amazon's relational database.

Work Completion Rate: The number of user stories completed was all 3. The estimated work hours completed for the sprint was about 20 hours.
