

Release Plan 1.0 -- Clothr 1.0 last edited 12/3/17

Release Date: December 3, 2017

High level goals:

- 1) To create an app that has cards of clothes. You can swipe the cards left or right, you swipe right to like the article of clothing and it will save on a list, which will allow you to purchase it. If you swipe left you don't like the article of clothing and it goes away.
- 2) To have different filters to allow clothes specific to the user

User Stories:

Sprint 1 - :

As a developer, I want to familiarize myself with Xcode and swift language so that I can help develop the app

As a developer, I want to familiarize myself with Parse database and Shop Style's API so that I can learn how to connect different APIs to our app

As a developer, I want to familiarize myself with Shop Style's relational database so that I can use a database within the app

Sprint 2 - User Interface:

As a user, I want to be shown a picture of clothing on the main page so that I could decide whether or not to save or discard it.

As a user, I want to be able use swiping features similar to that of tinder and swipe left to save the images of the clothes I like, and swipe right to discard the images of clothes I do not like so that I can revisit the image that I liked.

As a user, I want to be able to view the saved images of the clothing I swiped left on in another page so that I can buy them later.

As a user, I want to be shown a login page so that I can log in to the app and see my own list of saved clothing items.

Sprint 3 - Integrating APIs:

As a user, I want to be able to access clothing from the Shop Style's clothing selection so that I can see a larger selection of clothing and be able to buy it.

As a user, I want to be able to see the details of the current piece of clothing in another page when I tap on it so that I could be sure of the clothing I want to save.

Sprint 4 - Database and UI touchups:

As a user, I want to be able to view different tags so that I could focus on one type of clothing instead of clothes I don't want to see.

As a user, I want to be able to navigate the app on any sized device w/a nice UI so that I can use the app with ease through a well done design.

Product Backlog:

- Machine learning - learning the users style and presenting clones

- Shop the look - buying clothes that models are wearing in photos
- Integrate other APIs
- Other filters (by color, brand, etc)
- Resetting Password
- App logo
