Sprint 2 Report

Clothr, Clothr Team
November 5, 2017

Actions to Stop Doing: We need to communicate with each other more on what we have accomplished, and work on merging our codes. A big problem we faced was trying to merge our code since we were all working on our own branch.

Actions to Start Doing: We should constantly be pushing and pulling the git, so we don't have merging problems so often. We should also implement more time to code together in the same area, so we can get better understanding of each other's code.

Actions to Keep Doing: We should keep our meeting times since it's working. Even when there is one person who can't come, we are able to adjusting our times to make sure we meet up. We are also doing really well with our individual assignments and accomplishing what we need to do.

Work Completed/Not Completed: We have successfully created a working app with both a database and a working API. The app is able to pull random clothing selections from ShopStyle. The user is able to swipe left or right on the picture of the clothing indicating whether or not they are interested in the item.

Work Completion Rate: We were able to finish three of the four user stories. The only user story we haven't fully completed is a working login in page. The total number of points completed this sprint in 26 points. The estimated hours completed was about 20-25hours.
