Pre-requisites: This app is only available on MacOS, the user needs to have xCode 9.1 installed

To Install clothr go to the Master repository at github.com
Url to access the github and directory below
- https://github.com/czarcabral/clothr/tree/master

Clone the repo using the command "git clone https://github.com/czarcabral/clothr.git"
This command clones the repository and all of the accessory files.

clothr.xcworkspac
e

After the cloning is complete go to the directory located at clothr/clothr/clothr then open the clothr.xcworkspace file. Opening this file should open the project in xcode.

Once the project is open in xCode, select the device you want to test it on. By clicking the icon that says iPhone 7 in the top left corner of the picture above. Once you selected the device click compile and run the program on the iphone simulator. To run and compile click the play button located in the top left.

Once the simulation is finished compiling you will see it. An example is located on the left. From here you can use the product.
